

Name - S. Jaxon Rizal

Reg. No - 192511421

Course Code - CSA0313

C05 - AT1 - PSEUDOCODE WRITING TASK (Any 10)

1. Write pseudocode for Breadth First Search (BFS) Traversal.

Algorithm BFS( $G$ , start)

1. for each vertex  $v$  in  $G$   
     $visited[v] \leftarrow false$
2. create empty queue  $Q$
3.  $visited[start] \leftarrow true$
4. enqueue( $Q$ , start)
5. while  $Q$  is not empty  
     $u \leftarrow dequeue(Q)$   
    visit  $u$   
    for each vertex  $v$  adjacent to  $u$   
        if  $visited[v] = false$   
             $visited[v] \leftarrow true$   
            enqueue( $Q$ ,  $v$ )

2. Write pseudocode for Depth First Search (DFS) Traversal.

Algorithm DFS( $G, v$ )

1.  $visited[v] \leftarrow true$
2. visit  $v$
3. for each vertex  $u$  adjacent to  $v$   
    if  $visited[u] = false$   
        DFS( $G, u$ )

3. Write pseudocode for Breadth First Search (BFS) Traversal.

Algorithm BFS( $G, start$ )

1. for each vertex  $v$  in  $G$   
     $visited[v] \leftarrow false$
2. create empty queue  $Q$
3.  $visited[start] \leftarrow true$
4. enqueue( $Q, start$ )
5. while  $Q$  is not empty  
     $u \leftarrow dequeue(Q)$   
    visit  $u$   
    for each vertex  $v$  adjacent to  $u$   
        if  $visited[v] = false$   
             $visited[v] \leftarrow true$   
            enqueue( $Q, v$ )

4. Write pseudocode for Dijkstra's Shortest Path Algorithm.

Algorithm Dijkstra ( $G$ , source)

1. for each vertex  $v$  in  $G$

$\text{distance}[v] \leftarrow \infty$

$\text{visited}[v] \leftarrow \text{false}$

2.  $\text{distance}[\text{source}] \leftarrow 0$

3. for  $i \leftarrow 1$  to  $|V|$

$u \leftarrow$  vertex with minimum

$\text{distance}[u]$  not yet visited

$\text{visited}[u] \leftarrow \text{true}$

    for each vertex  $v$  adjacent to  $u$

        if  $\text{visited}[v] = \text{false}$  and

$\text{distance}[u] + \text{weight}(u, v) < \text{distance}[v]$

$\text{distance}[v] \leftarrow \text{distance}[u] + \text{weight}(u, v)$

4. return distance

5. Write pseudocode for Prim's Minimum Spanning Tree Algorithm.

Algorithm PrimMST( $G$ )

1. for each vertex  $v$  in  $G$   
     $key[v] \leftarrow \infty$   
     $parent[v] \leftarrow NIL$
2. choose any vertex  $r$  as start vertex  
     $key[r] \leftarrow 0$   
     $parent[r] \leftarrow NIL$
3. create a min priority queue  $Q$   
    insert all vertices of  $G$  into  $Q$   
    with key values
4. while  $Q$  is not empty  
     $u \leftarrow \text{extract-min}(Q)$
5. for each vertex  $v$  adjacent to  $u$   
    if  $v$  is in  $Q$  and  $\text{weight}(u, v) < key[v]$   
         $key[v] \leftarrow \text{weight}(u, v)$   
         $parent[v] \leftarrow u$   
         $\text{decrease-key}(Q, v, key[v])$
6. return  $parent[]$  which represents MST

6. Write pseudocode for Floyd-Warshall Algorithm.

Algorithm FloydWarshall ( $W$ )

1. for  $i \leftarrow 1$  to  $|V|$   
    for  $j \leftarrow 1$  to  $|V|$   
         $D[i][j] \leftarrow W[i][j]$
2. for  $i \leftarrow 1$  to  $|V|$   
     $D[i][i] \leftarrow 0$
3. for  $k \leftarrow 1$  to  $|V|$   
    for  $i \leftarrow 1$  to  $|V|$   
        for  $j \leftarrow 1$  to  $|V|$   
            if  $D[i][k] + D[k][j] < D[i][j]$   
                 $D[i][j] \leftarrow D[i][k] + D[k][j]$
4. return  $D$

7. Write pseudocode for Prim's Minimum Spanning Tree Algorithm.

Algorithm PrimMST ( $G$ , start)

1. for each vertex  $v$  in  $G$   
     $key[v] \leftarrow \infty$ ,  $parent[v] \leftarrow NIL$
2.  $key[start] \leftarrow 0$
3. create min priority queue  $Q$  and insert all vertices
4. while  $Q$  is not empty  
     $u \leftarrow \text{extract-min}(Q)$   
    for each vertex  $v$  adjacent to  $u$   
        if  $v$  is in  $Q$  and  $\text{weight}(u, v) < key[v]$   
             $key[v] \leftarrow \text{weight}(u, v)$   
             $parent[v] \leftarrow u$
5. return  $parent$

8. Write pseudocode for Kruskal's Minimum Spanning Tree Algorithm.

Algorithm KruskalMST ( $G$ , start)

1. for each vertex  $v$  in  $G$   
    make-set( $v$ )
2. sort all edges of  $G$  in non-decreasing order of weight
3.  $MST \leftarrow \emptyset$
4. for each edge  $(u, v)$  in sorted order  
    if find-set( $u$ )  $\neq$  find-set( $v$ )  
         $MST \leftarrow MST \cup \{(u, v)\}$   
        union( $u, v$ )
5. return  $MST$

9. Write pseudocode for Topological Sort using Kahn's Algorithm.

Algorithm TopologicalSort ( $G$ )

1. for each vertex  $v$  in  $G$   
    indegree[ $v$ ]  $\leftarrow 0$
2. for each edge  $(u, v)$  in  $G$   
    indegree[ $v$ ]  $\leftarrow$  indegree[ $v$ ] + 1
3. create empty queue  $Q$
4. for each vertex  $v$  in  $G$   
    if indegree[ $v$ ] = 0  
        enqueue( $Q, v$ )
5. create empty list  $L$
6. while  $Q$  is not empty  
     $u \leftarrow$  dequeue( $Q$ )  
    append  $u$  to  $L$   
    for each vertex  $v$  adjacent to  $u$   
        indegree[ $v$ ]  $\leftarrow$  indegree[ $v$ ] - 1  
        if indegree[ $v$ ] = 0  
            enqueue( $Q, v$ )
7. if length of  $L$  =  $|V|$   
    return  $L$  (topological order)  
else  
    return "Graph has a cycle, topological sort not possible"

10. Write pseudocode for Dijkstra's Shortest Path Algorithm.

Algorithm Dijkstra ( $G$ , source)

1. for each vertex  $v$  in  $G$   
     $\text{distance}[v] \leftarrow \infty$   
     $\text{visited}[v] \leftarrow \text{false}$   
     $\text{parent}[v] \leftarrow \text{NIL}$
2.  $\text{distance}[\text{source}] \leftarrow 0$
3. create min priority queue  $Q$  and insert all vertices  
    with key as  $\text{distance}[v]$
4. while  $Q$  is not empty  
     $u \leftarrow \text{extract-min}(Q)$   
     $\text{visited}[u] \leftarrow \text{true}$   
    for each vertex  $v$  adjacent to  $u$   
        if  $\text{visited}[v] = \text{false}$   
             $\text{alt} \leftarrow \text{distance}[u] + \text{weight}(u, v)$   
            if  $\text{alt} < \text{distance}[v]$   
                 $\text{distance}[v] \leftarrow \text{alt}$   
                 $\text{parent}[v] \leftarrow u$   
                 $\text{decrease-key}(Q, v, \text{alt})$
5. return distance, parent
